Step 1: Ensure Google Chrome is Updated

- Open Chrome.
- Click the three dots (⋮) in the top-right corner.
- Go to "Help" · "About Google Chrome".
- Check if there is required update.

Step 2: Check Your Windows Version

- Press Windows Key.
- Write view your PC name.
- Look for "System type":
    - If it says "64-bit Operating System", download chromedriver-win64.zip.
    - If it says "32-bit Operating System", download chromedriver-win32.zip.

Step 3: Download Chrome Driver

- Disconnect the server, and connect with your personal internet.
- Go to https://googlechromelabs.github.io/chrome-for-testing/
- Choose the "Stable" channel.
- Download the correct binary: chrome driver > win64
- Copy URL and paste it to the search bar of the browser.
    - chromedriver-win64.zip · for 64-bit Windows
    - chromedriver-win32.zip · for 32-bit Windows

Step 4: Install and Extract Chrome

1- After downloading chromedriver-win64.zip, go to your Downloads folder.
2- Right-click on chromedriver-win64.zip.
3 - Choose "Extract All..." from the context menu.
4 - Select a destination folder (e.g., Desktop or Downloads).
5 - Click "Extract".
6- Open the extracted folder.
7- You will see a file named chrome driver
8- Open the Folder.

Step 5: Move chromedriver.exe to Your App Folder

1- Right-click on chromedriver.exe and choose "Copy".
2- Navigate to the folder where your main app (.exe) is located.
3- Right-click in the folder and choose "Paste".
